The ‘simple’ still.

This is a VERY bad, dangerous still. Using plastic in a still, especially in the still column is NOT a safe way to build a still.

Here are some places to look:

http://www.homedistiller.org/forum/viewforum.php?f=16  (pot still design ‘forum’)

http://www.homedistiller.org/forum/viewtopic.php?t=19711  (designs thread)

http://www.homedistiller.org/equip/designs  (Still design’s, many of them).

http://wiki.homedistiller.org/Boka_Reflux_Still_-_How_To_Build  and the discussion thread:

http://www.homedistiller.org/forum/viewtopic.php?t=20250

NOTE, all information on www.homedistiller.org or the www.homedistiller.org/forum forum’s is free, and there are wonderful still plans there. They are MUCH better than the plans in this highly outdated document you were looking for.
